

Algorithm

Sieve of Eratosthenes

MAIN IDEA | *Cross out all the multiple number from $2 \rightarrow n$*

EXAMPLE : Find all prime number in the following list

2, 3, 4, 5, 6, 7, 8, 9, 10

Step 1: 2, 3, ~~4~~, 5, ~~6~~, 7, ~~8~~, 9, ~~10~~

Step 2: 2, 3, ~~4~~, 5, ~~6~~, 7, ~~8~~, ~~9~~, ~~10~~

Prime : 2, 3, 5, 7

Merge Sort

MAIN IDEA | *Find the mid point and then split array into half*

Merge sort the left array

Merge sort the right array

Merge left and right array

Better apply to LinkedList

Run time: $O(n \log n)$

EXAMPLE : Sort the following list

1.

4	3	7	2	1	6
---	---	---	---	---	---

↙ ↘

2.

4	3	7	2	1	6
---	---	---	---	---	---

↙ ↘ ↙ ↘

3.

4	3	7	2	1	6
---	---	---	---	---	---

↙ ↘ ↙ ↘

4.

4	3	7	2	1	6
---	---	---	---	---	---

↘ ↙ ↘ ↙

5.

3	4	7	1	2	6
---	---	---	---	---	---

↘ ↙ ↘ ↙

6.

3	4	7	1	2	6
---	---	---	---	---	---

↘ ↙

7.

1	2	3	4	6	7
---	---	---	---	---	---

Quick Sort

MAIN IDEA	<i>All about partition</i> <i>Pick one pivot random, first number, mid or last number</i> <i>Any number less then pivot going to left array</i> <i>Any number equal to pivot going to mid array</i> <i>Any number greater then pivot going to right array</i> <i>Recursively sort the left and right array</i> <i>Better apply to array</i> <i>Run time: worse case-$O(n^2)$, best case-$O(n\log n)$</i>
-----------	---

EXAMPLE : Sort the following list

- ←
1.

4	3	7	2	1	6
---	---	---	---	---	---

 pivot: 7
- ←
2.

4	3	7	2	1	6
---	---	---	---	---	---

 pivot: 7
- ←
3.

4	3	6	2	1	7
---	---	---	---	---	---

 pivot: 7
- ←
4.

4	3	6	1	2	7
---	---	---	---	---	---

 pivot: 7
- ← → ←
5.

4	3	6	2
---	---	---	---

 pivot: 3

1	7
---	---

 pivot: 1
-
6.

1	2	3	5	6	7
---	---	---	---	---	---

Quick Select

MAIN IDEA	<i>Similar as quick sort</i> <i>The difference is quick sort recursively sort left, mid and right Quick Select only recursively sort left or right</i>
-----------	---

Binary Search

MAIN IDEA | *Find mid point then compare with the target*
Base case if the mid is equal to target then return it
If the mid is less than target recursive left half
If the mid is greater than target recursive right half
Run time: $O(\log n)$

EXAMPLE : Find 7 in the following sorted array

1 3 5 7 8
L M R

1.

1	3	5	7	8
---	---	---	---	---

 mid: 5, $5 < 7$
 L M R

2.

1	3	5	7	8
---	---	---	---	---

 mid: 7, $7 == 7$
